

Infiltrator Systems

SI Precast Concrete offers a complete line of Infiltrator products. Infiltrator is the world's leading manufacturer of plastic leach field drainage chambers for environmental onsite wastewater solutions. Infiltrator chambers are a direct replacement for stone and pipe leach fields and have revolutionized the septic industry. Infiltrator chambers provide a cost effective, efficient method for handling residential and commercial wastewater.

Infiltrator Systems are approved in all 50 states and all 10 Canadian provinces with up to a 50% smaller footprint as compared to stone and pipe systems. There are over 1.5 million Infiltrator systems installed and more than 27 million units in-ground in the United States and 24 other countries. Infiltrator has stood the test of time with a history of performance since 1987. One in four septic systems in the US is an Infiltrator chamber system.

Stock Number	Product	Size	Units Per Pallet
9030150	Quick 4 Standard Chamber	34" x 48" x 12"	75
9030155	Quick 4 Standard End Cap		210
9030046	Quick 4 Equalizer 36 Chamber	22" x 48" x 12"	150
